Montmorillonite - Property and Usage

Superior Clay Property with 3 Nano-Layers

- Montmorillonite (MMT) is a natural clay mineral belonging to the smectite group. It is a product of volcanism and hydrothermal activity.
- MMT color can ranged from white, yellow, green pink and red.
- Due to its 3 Nano-layers structure, MMT takes up water between their layers and can exchange organic liquids.
- MMT Nano Clays has superior overall properties compared to traditional additives and fillers, for ² example, strength, stiffness, optical clarity and permeability.

Usage

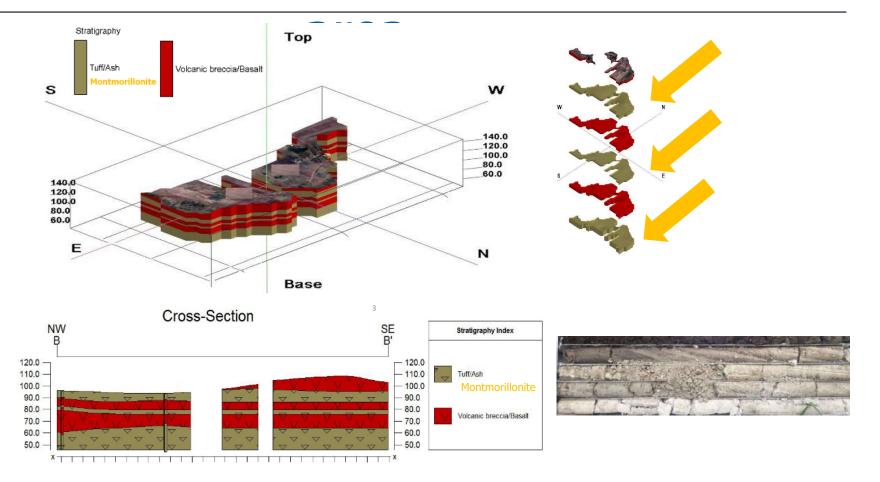

- Cattle feed and pet food: MMT clay is used as an anti-caking agent.
- Bleaching Agent: For vegetable oil and biodiesel oil.
- Alcohol Beverage: In powder form, it can be used as flocculant by tossing into the pond or pools of water.
 Same method could be used to purify organic matter in water.
- Cosmetic: MMT is used to absorb excess water and oil, reduce too high cosmetic density, stabilize ingredient formula, extend shelf life, adjust cosmetic viscosity and used in deep cleansing agent.

Montmorillonite Project Benefit

Expect market for 150,000 tons capacity

Bleaching Clay for cooking oil Industry 75,000 Ton/year Antitoxin Clay for Animal Feed Industry 75,000 Ton/year

Expect Market Price

Bleaching Clay for cooking oil Industry 442 USD/Ton Antitoxin Clay for Animal Feed Industry 882 USD/Ton

Expect Project Benefit per Year

Bleaching Clay for cooking oil Industry 22.74 M.USD/Ton Antitoxin Clay for Animal Feed Industry 55.82 M.USD/Ton TOTAL EXPECT BENEFIT 78.56 M.USD/Year
